Claude for adesso

Your quick guide to Skills, Projects, and Cowork

1 Skills

2 Projects

3 Cowork

3 features · step by step · no prior experience needed

○ Three things you'll learn

Skills

Teach Claude a repeatable task so it always works the same way — no re-explaining every time.

Projects

Give Claude long-term context about a topic, client, or team so it always "knows the background."

Cowork

Let Claude work autonomously — open files, run tasks, and report back while you do other things.

You need a Claude Enterprise account via adesso. Request access through the [matrix24 tool](#), then log in at [claude.ai](#) via adesso SSO.

➤ Please request the license only after consulting your team lead and only for use cases not covered by adessoGPT.

01

What is a Skill? How do I create one?

Teach Claude a repeatable task — consistent output, every time.

What is a Skill?

A Skill is a saved instruction file that tells Claude exactly how to do a specific task.

- ✓ Works the same every time — consistent output
- ✓ No need to repeat long prompts in every chat
- ✓ Shareable with teammates in the same org
- ✓ Claude reads the skill file before answering

adesso already has ready-made Skills for HTML, PowerPoint, Word and more — no need to build everything from scratch.

[Registration](#)

Creating a Skill — step by step

1 Open "Anpassen" In the left sidebar, click Customize (Anpassen). This opens the settings panel where Skills are managed.

2 Go to "Skills" Inside the Customize/Anpassen panel, navigate to the "Skills" section.

3 Click "New Skill" Give it a clear name — e.g. "adesso Email Draft". The name helps Claude know when to apply it.

4 Write the instruction Describe what Claude should do: format, tone, what to include or avoid.

5 Save, test, refine Open a new chat and try it out. Edit and iterate until the output is right.

Pro tip: Add one concrete example in your skill. Claude learns much better from examples than from abstract rules alone.

Pro tip: give Claude in a chat information's and let him build the skill

02

What is a Project? How do I set one up?

Persistent context for Claude — your files, your briefing, your project.

What is a Project?

A Project is a persistent workspace where Claude remembers everything you've told it — context that stays across all chats.

- ✓ Upload documents, templates, guidelines once — Claude always has them
- ✓ Set a system prompt so Claude "knows its role" in this project
- ✓ All chats within the project share the same context
- ✓ Great for: clients, recurring tasks, team formats

Client project

Weekly report

Workshop prep

Team onboarding

Setting up a Project

1

Create a new Project In the left sidebar, click "New Project". Give it a clear name — e.g. "AI Peer Group" or "Client: BVAG".

2

Write a system prompt Claude's "briefing": what project is this, what is your role, what tone, what should it always know?

3

Upload relevant files Add documents Claude should always know: templates, guidelines, org charts, previous reports.

4

Start chatting inside the project Click "New Chat" within the project — Claude always has the full context from your system prompt and files.

Good system prompt: Who is Claude in this project? Who are you? What context is relevant? What tone?

C O W O R K

03

What is Cowork? How do I use it?

Let Claude work autonomously — plan, execute, and deliver results.

What is Cowork?

Cowork lets Claude work autonomously on your computer, it can open files, read folders, execute tasks, and come back with results.

- ✓ Claude acts as an agent — it plans and executes steps on its own
- ✓ Can read and write local files, not just chat text
- ✓ You assign the task, Claude does the work, you review the output
- ✓ Ideal for repetitive or multi-step tasks

Example: "Take all 12 project status docs from this folder, extract the key decisions, and create a consolidated summary in a new Word file." — Claude does it, you review.

Caution: Claude can **move, overwrite, or delete files**. Always grant access only to specific, dedicated folders — never to full drives or folders containing client data.

Using Cowork

1 Install Claude Cowork Download from claude.ai/download. On adesso devices, IT approval may be needed — check with your local IT team.

2 Grant folder access When prompted, allow access only to specific folders. Claude only sees what you allow.

3 Describe the task clearly Write what you want done, where the files are, and what the output should look like.

4 Review before confirming Claude shows its plan before starting. Read through and confirm — or adjust if something looks wrong.

5 Check the output When done, review the result. Claude can be asked to refine or redo specific parts if needed.

Caution — check before you confirm: Claude can delete or overwrite files without warning. Always review the plan, grant only minimal folder access, and never include folders with sensitive client data.

YOU'RE READY

Start with one thing.

Pick the feature that solves your most annoying repetitive task.

Skill

Always write things the same way

Project

Stop re-explaining context every time

Cowork

Let Claude do the multi-step work
